

BitVector::BitVector

BitVector::clear

BitVector::shrink

BitVector::resize

```
graph LR; A[BitVector::BitVector] --> D[BitVector::resize]; B[BitVector::clear] --> D; C[BitVector::shrink] --> D;
```

The diagram illustrates a relationship between four methods of the BitVector class. On the left, three white rectangular boxes are stacked vertically, each containing a method name: 'BitVector::BitVector' at the top, 'BitVector::clear' in the middle, and 'BitVector::shrink' at the bottom. On the right, a single gray rectangular box contains the method name 'BitVector::resize'. Three blue arrows originate from the right side of the three white boxes and point towards the left side of the gray box, indicating that each of the three methods on the left calls or interacts with the 'resize' method on the right.
